

VirtualWisdom® QuickStart Services

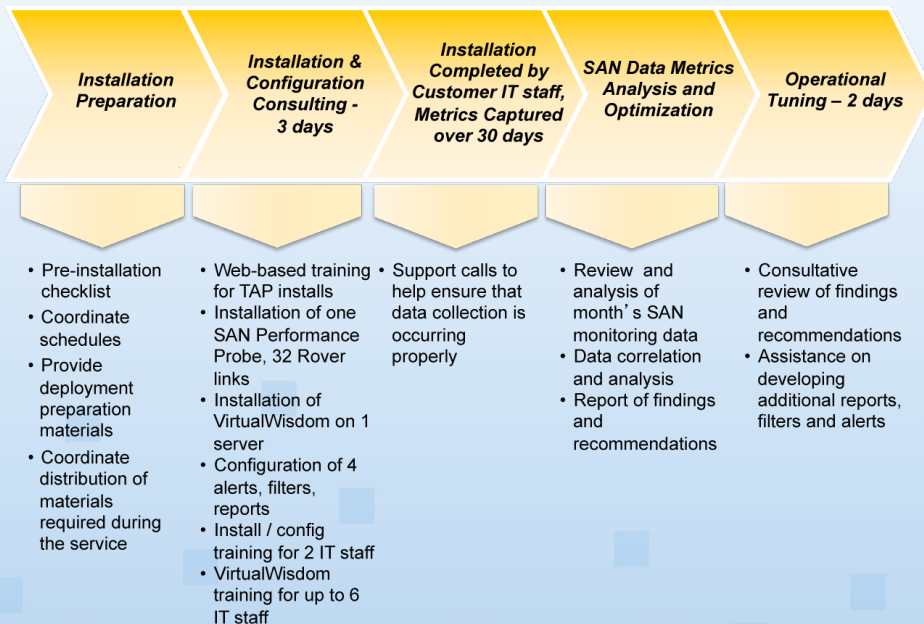

VirtualWisdom QuickStart Services are designed to jumpstart the deployment of Virtual Instruments' VirtualWisdom software and associated SANInsight™ hardware products such as Traffic Access Points (TAPs), SAN Performance Probe Rovers, and Protocol Analyzers. These services combine on-site training and deployment services to help ensure a successful initial VirtualWisdom deployment.

Features

- Project management, planning, logistics, remote preparation, and up to four days onsite installation assistance for basic configuration and transfer of knowledge for basic measuring and analysis of data
- Review of one month of SAN monitoring data; provides correlation and analysis, review of findings and recommendations.
- Training is provided on interpreting key metrics, understanding optimization recommendations and implementing recommended policies, alert and reports

Benefits

- Enables IT staff to successfully complete the installation of all VirtualWisdom hardware and software components
- Enables IT staff to understand and monitor all relevant SAN metrics for later analysis
- Enables IT staff to realize benefits in the first week and the first month of VirtualWisdom deployment
- Provides in-depth education on metrics analysis and how to develop and use reports to optimize your SAN
- Immediate results

Express option includes switch link monitoring (SAN Availability Probe)

Enterprise option adds hardware link monitoring (SAN Performance Probe and Rover)

Expert option adds Protocol Analyzer monitoring
